# Dust mite allergy

## General information

Allergen exposure in the home significantly influences the frequency and severity of various allergic symptoms. Among other factors, dust mites and their excrements are one of the dominant allergens that cause asthma, atopic dermatitis or allergic rhinitis. According to a statistic of the WHO 15% of the European population suffer from dust mite allergies and the numbers are rising. ALLERGIKA® Encasings are a safe and effective therapeutic option to reduce allergic symptoms.

Ranking	Indication	Number of patients	Percentage
1	Dry, sensitive and irritating skin	350 million	50%
2	Sun allergy	140 million	20%
3	<b>Dust mite allergy</b>	<b>120 million</b>	<b>15%</b>
4	Pollen	120 million	17%
5	Allergic asthma	100 million	14%
